Managing money, investment, and financial risk

Finance is the study and management of money, investments, and financial risk, covering personal, corporate, and public financial decision-making.

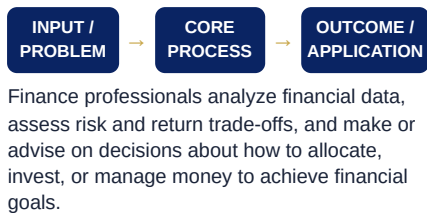

● DEFINITION

The management of money, including activities like investing, borrowing, lending, budgeting, saving, and forecasting.

● WHY IT MATTERS

Finance underlies every business and economic decision, from how companies fund growth to how individuals plan for retirement.

● WORKING PRINCIPLE

● QUICK FACTS

- ▶ The global financial markets trade trillions of dollars in value every single day
- ▶ The concept of compound interest, central to finance, has been called 'the eighth wonder of the world'

● KEY TERMS

- Time value of money
- Risk and return
- Capital budgeting
- Portfolio

● CORE CONCEPTS

- ▶ Time value of money
- ▶ Risk and return
- ▶ Financial statement analysis
- ▶ Capital budgeting

● APPLICATIONS

- ▶ Corporate financial planning
- ▶ Investment portfolio management
- ▶ Risk assessment and management
- ▶ Personal financial planning

● REAL-LIFE EXAMPLES

- ▶ Stock market investing
- ▶ Corporate budgeting and forecasting
- ▶ Bank loan approval processes

● ADVANTAGES

- ▶ High-demand, well-compensated career field
- ▶ Directly impacts personal and organizational financial wellbeing
- ▶ Diverse specializations across many industries

● LIMITATIONS

- ▶ Markets carry inherent uncertainty and risk
- ▶ Requires continuous learning to track economic and regulatory changes
- ▶ High-pressure decision-making environment

CAREER OPPORTUNITIES

Financial analyst, Investment banker, Portfolio manager, Corporate finance manager

INDUSTRY APPLICATIONS

Banking, Investment management, Corporate finance, Insurance

RESEARCH AREAS

Behavioral finance, Algorithmic trading, Sustainable finance (ESG investing)

FUTURE SCOPE
