

Business Analytics

Using data to drive smarter business decisions

106

Business Analytics uses data analysis, statistical models, and technology to inform business decision-making, transforming raw business data into strategic insight.

DEFINITION

The practice of using data analysis, statistical models, and technology to understand business performance and inform decision-making.

WHY IT MATTERS

Business analytics allows organizations to make evidence-based decisions rather than relying on intuition alone, improving efficiency and competitive advantage.

WORKING PRINCIPLE

Business analysts collect and analyze data across business functions — sales, operations, finance — using statistical and visualization tools to identify trends and inform strategic decisions.

QUICK FACTS

- Businesses using data-driven decision-making have been shown in studies to outperform competitors relying primarily on intuition
- Business analytics dashboards can now update in real time using live data feeds
