132

SCI (Science Citation Index) Publications refers to research papers published in journals indexed by Clarivate's Science Citation Index, a mark widely recognized as a benchmark of research quality and academic rigor.

DEFINITION

Peer-reviewed research articles published in journals indexed under the Science Citation Index, a citation database tracking scientific literature quality and impact.

WHY IT MATTERS

SCI indexing is often required for academic promotions, PhD qualification, and grant applications, making it one of the most sought-after publication credentials in scientific research.

WORKING PRINCIPLE

INPUT / PROBLEM

CORE PROCESS

OUTCOME / APPLICATION

Journals apply for SCI inclusion by meeting strict editorial, peer-review, and citation-quality standards; once indexed, papers published in them are tracked for citations, contributing to author and journal impact metrics.

QUICK FACTS

- ▶ The Science Citation Index was created in 1964 by Eugene Garfield
- ▶ SCI-indexed journals span thousands of titles across all scientific disciplines
- ▶ Citation count in SCI journals is often used to calculate a researcher's h-index
