

Web of Science Publications

Publishing in Clarivate's premier multidisciplinary research platform

135

Web of Science Publications refers to research indexed on the Web of Science platform, a long-established multidisciplinary citation database used to evaluate research impact and journal quality worldwide.

● DEFINITION

Research articles indexed within the Web of Science platform, a citation indexing service covering multiple databases including SCI, SCIE, and the Social Sciences Citation Index.

● WHY IT MATTERS

Web of Science is one of the oldest and most respected citation platforms, and its Journal Impact Factor remains one of the most cited research quality metrics in academia.

● WORKING PRINCIPLE

Web of Science tracks citations between indexed publications across its Core Collection databases, generating metrics like Journal Impact Factor and researcher citation reports used for institutional and individual research evaluation.

● QUICK FACTS

- ▶ Web of Science traces its origins to the Science Citation Index founded in 1964
- ▶ The Journal Impact Factor it produces is published annually in the Journal Citation Reports
- ▶ Web of Science covers content dating back over a century in some disciplines

● KEY TERMS

- Impact Factor
- Core Collection
- Citation report
- Journal Citation Reports
- Bibliometrics

● CORE CONCEPTS

- ▶ Journal Impact Factor
- ▶ Citation report analysis
- ▶ Core Collection indexing
- ▶ Multidisciplinary coverage

● APPLICATIONS

- ▶ Academic promotion and tenure evaluation
- ▶ Journal ranking and impact factor calculation
- ▶ Research trend analysis
- ▶ Institutional research benchmarking

● REAL-LIFE EXAMPLES

- ▶ A journal's official Impact Factor published annually via Web of Science
- ▶ A university tracking faculty citation counts through Web of Science
- ▶ Research trend reports generated from Web of Science data

● ADVANTAGES

- ▶ Long-established, highly trusted citation platform
- ▶ Produces the widely referenced Journal Impact Factor
- ▶ Covers sciences, social sciences, and humanities

● LIMITATIONS

- ▶ Subscription cost can limit access for smaller institutions
- ▶ Coverage skews toward English-language journals
- ▶ Impact Factor has been criticized as an imperfect quality measure

CAREER OPPORTUNITIES

Bibliometrics analyst, Research impact officer, Academic librarian, Publishing strategy consultant

INDUSTRY APPLICATIONS

Universities and research institutes, Scientific publishing, Government funding agencies, Corporate research benchmarking

RESEARCH AREAS

Citation analysis methodology, Journal impact metrics, Research trend forecasting, Cross-disciplinary bibliometrics

FUTURE SCOPE

Ongoing development of alternative, more nuanced impact metrics is expected to complement traditional Web of Science indicators.

● CURRENT TRENDS

Growing use of complementary metrics like CiteScore and altmetrics alongside traditional Web of Science Impact Factor.

● SUMMARY

Web of Science publications are tracked on one of academia's oldest and most trusted citation platforms, producing the widely referenced Journal Impact Factor used across research evaluation.
